Dear Terrie:

Here are our comments relating to "Home Babysitter" for the
VIC-20:

1. ALPHABET BLOCKS

    The "W" in Alphabet Blocks should be musical instead
    of the "pit-pat" sound the W now makes. Otherwise the
    Alphabet Blocks section is okay.

2. FACEMAKER

    Facemaker is too complicated to use. User should
    only have to push a function key once to change
    a face feature. I.E. hat changes every time you
    push F1. The COLOR could be changed by pressing
    the proper number keys, instead of trying to use
    the same function key for everything. Put the
    LEAST COMMON features used on the SHIFTed function
    keys.

    Is it possible to make the eye wink, or a mouth
    smile after a pause...to add just a bit of
    animation to make a child user laugh? Also,
    how about a quick blip or other sound effect
    every time a feature is altered?

3. COUNTING TUTOR

    This section does not need to be revised.

These are the changes we require before we can release the
product. Bill Wade's comments, which match these, are included on
the attached memo.

We'll release this program as soon as we receive a corrected copy.
Call me if yu have any questions.

Best regards,

Michael S. Tomczyk
